DETAILED ACTION***Specification***

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: there is *no* teaching of phenyl alkyl phosphate, $(C_6)R_2 PO_4$, a cyclic ethyl carbonate, $C_2 H_4 CO_3$, and derivatives thereof, where the 1 to 4 hydrogen groups are replaced with a C1-C6 alkane in the specification. To overcome this objection, it is suggested that the above recited limitations are added to the specification.

Allowable Subject Matter

Claims 1-32 are allowable of the prior art of record, because the combination of a flame retardant, anode passivation additive and gas suppression additive provides results which are significantly superior to results of the individual components and would not be obvious to one of ordinary skill in the art. The results in Table 1 show that the three materials together results in a cell volume change after overcharge of only 2.9% for the three additives compared to 19% for the anode passivation additive alone and 16% for the flam

retardant alone. Therefore, the instant claims are allowable over the rejections of record.

Conclusion

Prosecution on the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. A shortened statutory period for reply to this action is set to expire TWO MONTHS from the mailing date of this letter.
